To whom it may concern

My background in programing started in 2015 when I taught myself the basics of javascript, html, and css via online courses. In 2016 I completed DevMountain's after hours web development course while employed full-time. I've developed multiple no server applications, and a full stack web application that you can visit at sportpugs.com. I am proficient in creating web applications using Angular, node.JS, Express, and PostgreSQL. I have taught myself ReactJs and Redux. I'm experienced in jquery, and many other javascript add-ons and libraries. I continue to push myself to learn new skills on a daily basis. I love problem solving, making interactive applications, and writing innovative code.

In addition to my web development skill set, I also hold leadership positions at my current place of employment (Intermountain Healthcare). These positions include: team lead, team trainer, and new system rollout supervisor. I am bilingual, have great organization skills, and I am task oriented.

On a personal note, I'm happily married to my beautiful wife. We are the proud, new parents of an amazing baby boy. I enjoy being a dad, participating in team sports (especially football), and exercising. I am continuously following new tech, anything to do with Tesla, and enjoy watching tech reviews on YouTube. I'm passionate about innovative design, and groundbreaking technology.

I am extremely driven, passionate about programing, and I love technology. I'm excited about what your company is doing, and the contribution I can make.

Thank you for your consideration.

Sincerely,

Joshua R. Smith
